

BUNGE MILLING

The leading
corn dry miller
in the world

Bunge Milling, the leading corn dry miller in the world, offers unparalleled value, quality and service. As part of Bunge North America, a leading agribusiness company, Bunge Milling has access to vast resources and expertise in processing, logistics, commodity markets and risk management tools. It is our commitment to innovation and our collaborative partnerships with the food and beverage manufacturers of America's favorite brands that are the hallmarks of our success.

How Bunge adds value to your products

ONLY THE BEST Bunge Milling purchases yellow and white corn directly from growers and leading dealers. Each truckload of grain is sampled and tested for moisture, test weight, stress cracks, foreign material and other attributes. This premium raw material allows us to produce the highest quality food ingredients.

AN EYE ON GRAIN PRICES

Bunge Milling continually monitors commodity markets to keep customers informed about trends affecting grain prices. This service translates into pricing flexibility for customers as Bunge Milling offers a variety of pricing options and risk management strategies.

OUR DEDICATION TO FOOD SAFETY IS UNSURPASSED

At Bunge Milling, our reputation for product safety is the gold standard of the industry. Safety is such a high priority at Bunge that we have a focused team whose sole purpose is to look for new and better ways to ensure product safety. Our team communicates regularly with representatives inside the USDA, FDA and EPA.

Since 1952, our Good Manufacturing Practices seminar has been attended by more than 6,000 U.S. corn and wheat millers and major food processors. Each year, this intensive, three-and-a-half-day seminar sheds light on the latest in federal regulations and guidelines, food safety and, more recently, bioterrorism prevention. We're proud to note that our own clients frequently adopt sanitation and food safety practices based on our innovations.

LOCATION AND LOGISTICS

Our strategic locations throughout North America create several advantages for our customers:

- Favorable shipping points
- Reliable supply
- Continuous, timely access to markets and materials

BEST CUSTOMER SERVICE IN THE INDUSTRY

At Bunge Milling, we pride ourselves on our ability to anticipate customer needs as well as respond to requests. We constantly reevaluate our procedures, looking for ways to serve our clients better and faster. For instance:

- Customer feedback is automatically funneled to management and department heads

This "culture of continuous improvement" starts at the very top of our organization and is instilled in each employee.

MORE CAPACITY, MORE INVENTORY, MORE OPTIONS Bunge Milling has more processing plants than any of our competitors. With five plants throughout North America, including the largest corn dry mill in the world at Danville, Illinois, we have the capacity to be very flexible and produce large quantities for peak demand periods. Our plants are located in both the eastern and western parts of the corn belt, which protects Bunge Milling against crop quality variation.
