

# TAKING AN ACTIVE ROLE IN SUSTAINABILITY

**Bunge promotes responsible agriculture** in our work with farmers nationwide. Through field meetings, workshops and lectures, we provide education and consultation on crop rotation, soil conservation, land-use planning and precision farming methods that increase farm productivity and reduce the need to cultivate new land. Each year, Bunge recognizes farmers who demonstrate outstanding environmental performance.

**Bunge plays an active role in Field to Market**, a consortium of industry, farm groups, academics and environmental NGOs (non-governmental organization) that develops systems to measure the environmental "fieldprint" of production agriculture in the United States and promoting better farming practices.

**We also continue to improve the environmental footprint of our own operations.** Our "5-5-15" sustainability targets include reducing greenhouse gas emissions per ton of output by 5 percent, reducing our water use per ton of output by 5 percent and reducing the total amount of material we send to landfills by 15 percent.

## Reporting on Sustainability

Bunge continues to work with the Global Reporting Initiative (GRI), the global standard-bearer for sustainability reporting, as well as other food companies and stakeholder groups to develop sustainability indicators for the food industry.

### HOW TO REACH US

For more information about Bunge Milling products and services, call 800 528-4633.
